Your trusted resource for aircraft appraisals

Establishing the value of an aircraft or engine is no easy task: with the complexity in asset transactions, most institutions and companies must source appraisals from multiple firms to ensure that they are on the right track. Not all appraisers see all transactions, so a variety of opinions is essential.

In response to this market need, ICF experts created **truebook™**, a web-based, aircraft appraisal platform that helps you manage your aircraft and engine portfolios with more actionable data, and determine the value of your investments.

Why ICF?

Formidable Industry Experience

Our multidisciplinary teams of former aviation industry executives have worked across all major U.S. airlines and numerous international carriers as well as lessors, MRO providers, financiers, and arrangers.

Certified Appraisers

ICF's team includes multiple appraisers certified by the International Society of Transport Aircraft Trading (ISTAT).

Spare Parts Expertise

Backed by our spare parts transaction database with over 12 million recent transactions, we support valuation of nearly \$10 billion-worth of airframe and engine inventories annually.

Streamlined Client-Appraiser Relationship

Whether we're developing a desktop appraisal or conducting an in-depth, onsite inspection, our valuation experts guide clients to a greater understanding of prices and return-on-investment. Our global staffing model means that you're connected with an expert – and on your way to an appraisal – much faster.

A New Approach to Appraisal Methodology

Rather than relying on a "traditional" depreciation curve, we capture the value of each component (engine, engine maintenance, and aircraft maintenance) and depreciate each based on assumed utilization (vs. absolute lifespan) as an aircraft ages.

ICF's Approach to Values

With **truebook™**, you have access to current, future, and out-of-production market data, including:

CAPA Supported by high-quality commercial fleet data and search-by-serial number functionality

 Current market values, base value, future base values and maintenance adjusted values

 Securitized or lease-encumbered values

 Current market and forecast lease rates

Designed for the Needs of the End User

Data is just one part of the equation. **truebook™** is the first appraisal platform designed to accommodate you with features like:

Real-time values for aircraft and portfolios, including fly-forward views

Multi-user and mobile access options

Modern, text-based searches for easy interface navigation
